

On June 5, 2018, the Granite State Roost, with assistance from BAE Systems and Rohde & Schwarz, hosted Mr. Dave Adamy as he presented Radar Electronic Protection (EP) Techniques in a morning session and Advanced Radar EP Techniques in an afternoon session.

One hundred Electronic Warfare professionals attended the day-long training session held at BAE Systems' Canal Street facility in Nashua, NH. EW fundamentals, including jamming equations, pulse modulation techniques and burn-through range, were presented in the morning session and detailed jamming techniques were presented in

the afternoon session, including the advantages and disadvantages of several general EP techniques, including Range-gate Pull-off/Pull-in and Cross Polarization Jamming. Each session concluded with concept applications using Dave's Antenna and Propagation Slide Rule, which was provided to each attendee as part of the course materials.

The Granite State Roost continues to expand its EW activities, serving the northern New England region, by reaching out across local industry to foster a deeper understanding and advancements in EW technologies. For more information about the Granite State Roost chapter, please contact Mr. Duane Beaulieu, President, at [duane.a.beaulieu@baesystems.com](mailto:duane.a.beaulieu@baesystems.com).
