

Senate Aerospace Caucus

Invites you for coffee and a morning download on

Wireless Spectrum

Perspectives from DoD, FAA, NASA, NTIA, and A&D Industry Reps

All wireless technologies require spectrum. In order to know one's location, to sense and avoid other aircraft, and to communicate in today's world, radio frequency spectrum is critical. Devices using unlicensed and cellular spectrum are both posing challenges and creating opportunities for the government. Congress is considering many legislative proposals regarding this crucial resource. Please join us for an informal conversation on spectrum policy, and why it's an important issue for Congress.

Speakers include:

Fred Moorefield, Director, Spectrum Policy and International Engagements, DOD CIO

Paige Atkins, Associate Administrator, NTIA (invited)

Brig. Gen. Edward A. Sauley III, Deputy Director, Operations for Joint Electromagnetic Spectrum Operations, USSTRATCOM (invited)

Victor Sparrow, Director, Spectrum Policy and Planning, NASA

Michael Richmond, Electronic Engineer, Spectrum Policy Office, FAA

Jennifer Warren, Vice President, Tech Policy & Regulation, Lockheed Martin Corporation

Coffee and light refreshments will be served.

March 18, 2016

8:30 am to 10:30 am

Senate Dirksen Office Building Room 562

*Sponsored by the Aerospace Industries Association and the Association of Old Crows
This is a widely attended event*
