

Windy City Roost hosts technical presentation from Dave Adamy in the Rohde & Schwarz Travelling Conference Room

On July 9th, the AOC Windy City Chapter hosted Dave Adamy for a technical presentation that addressed Antenna and Electromagnetic Propagation theory. I know what you're thinking, a riveting subject for anyone, never mind a bunch of geeks 😊. The presentation took place in the Rohde & Schwarz Travelling Conference Room (pictured below). A modern spacious air conditioned facility that comfortably seated 30 AOC member attendees along with a wide assortment of Rohde and Schwarz test equipment that the attendees were able to get acquainted with following the briefing.

Dave gave a wonderful technical presentation on the theory of RF propagation and all the math and formulas behind that theory. The theory intermixed with real life situations provided for a fully engaged audience. The attendees received several handouts (including the Antenna and Propagation Calculator) that will aid them in their future development activities.

The presentation was well attended by AOC members, and provided another opportunity for AOC members to expand their Electronic Warfare (EW) knowledge base. The focus of the Windy City Chapter is to try to provide technical speakers to its members on a regular basis as part of its efforts to help educate and keep members up to date on new trends and technologies in the field of EW.
